Growing Hyacinths in Water

Use biggest size bulbs preferably. Before placing the bulbs in the well-known Hyacinth glasses, the root base must be cleaned, so that all residue and old roots are removed. Fill the glasses with clean, cool water until the root base is touched. The glasses are then placed in a cool, dark closet or cellar until top growth is 4 inches above the bulb. This takes about eight weeks. Preferred temperature not over 50 degrees F.

When 4 inches top growth has been made, the glasses may be taken to a north window in the living room, and if necessary, some water can be added; never change the water completely. Hold temperature to not over 70 degrees F. Avoid too much direct sunlight.
